SKILLS

Technical Skills: Python, Java, MySQL, Git, REST API, Agentic LLMs

Frameworks: DSPy, Pydantic, LangChain, MCP

Other: AWS, GCP, Pandas, Numpy, Matplotlib, Seaborn, SciPy, Tensorflow, PyTorch, Scikit Learn, Pinecone, ChromaDB, LangGraph, LangSmith, HuggingFace, LaTeX

WORK EXPERIENCE

AI Engineer (part-time)

Tryp.com

Sep 2024 – Present

Denmark, Copenhagen

- Developing and optimizing a LLM-based customer support: improved multi-turn dialogue handling, achieved 86% intent recognition accuracy, reduced average response time by 83%, and handled 74% of all inbound inquiries ($\approx 10,500$ /month).
- Built an agentic travel search agent capable of multi-step reasoning across destinations, pricing, and user constraints.
- Variety of internal automation for customer support team; helping to write emails in any language, receive and update guidelines, get notified.
- Developing a FNN model to estimate ticket-price change durations using over 70 million flight records.

Co-Founder (Lead AI Engineer)

CoreAI

Jan 2025 – Present

Denmark, Copenhagen

- Deployed an AI chatbot system based on AWS Bedrock, providing 24/7 multilingual support for Danish social help, higher education, and Swedish migration support, with other Nordic regions in development.
- Built a microservice-like AWS backend (API Gateway, Lambda, DynamoDB, LightSail) with a RAG pipeline for real-time responses and booking integration (EasyWeek API).
- Integrated Telegram and WhatsApp frontends via API Gateway & Lambda for fast user access.
- Co-authored the AWS Machine Learning Blog post “Build a scalable AI assistant to help refugees using AWS.”
- Involved in business strategy, including Lean Canvas development, financial planning, investor materials, and public presentations.

Teacher Assistant

Roskilde University

Sep 2024 - Dec 2024

Denmark, Roskilde

- Guiding 52 students on debugging, problem-solving, and coding practices in a Java programming course.
- Providing feedback and grading on weekly homework assignments.

PROJECTS

Bachelor Project: Deep Learning-based Table Extraction from Pharmaceutical PDFs

Novo Nordisk

Feb 2025 – Jul 2025

- Fine-tuned a transformer-based vision model to locate tables with 94% precision.
- Developed program to parse table structure (rows, columns, headers) to automate data extraction and cut manual work.
- Reduced manual processing time and improved data consistency and fidelity.

Data Science | Podcast Watch Time Prediction (Github)

RUC University

May 2025 - June 2025

- Cleaned and validated real podcast listening data, conducting EDA to uncover key trends.
- Engineered new relevant features and built models (XGBoost, Linear Regression), tuning them with Optuna for optimal feature selection.
- Visualized insights and delivered a predictive model to inform content planning and boost user engagement.

EDUCATION

Technical University of Denmark DTU: MSc in Human-Centered Artificial Intelligence

Sep 2025 - Jun 2027

Roskilde University RUC: BSc in Computer Science and Mathematics

Sep 2022 - Jun 2025
